SUMMARY

Software Developer with 2+ years of experience building scalable full-stack SaaS applications using React.js, Next.js, Node.js, TypeScript, and MySQL. Progressed from a Front-End Developer internship to a full-time Full Stack Developer position within 6 months, taking ownership of multi-tenant platform architecture and backend performance optimization that reduced API response times by 25%. Experienced in designing RESTful and GraphQL APIs, high-performance web interfaces, and end-to-end cloud deployments on AWS within Agile and Scrum teams. Focused on clean, maintainable code, test-driven development, and code reviews to maintain consistent software quality.

PROFESSIONAL EXPERIENCE

Rysun Labs — Software Developer

June 2024 – Present | Hyderabad, India

Project: Club Management SaaS Platform — Ecube (Full Stack Developer)

- Architected a modular, multi-tenant SaaS platform supporting 20+ independent clubs from a single shared codebase, reducing per-club infrastructure overhead and accelerating feature rollout across the client base.
- Engineered responsive, accessible user interfaces in React.js and TypeScript, increasing component reusability by 25% and eliminating duplicate code across the entire front-end layer.
- Optimized MySQL database performance through stored procedures and query index tuning, cutting average API response time from 300 ms to 225 ms (25% faster) under peak load.
- Directed real-time data synchronization between the admin platform and 20+ member-facing services, leading API design sessions and providing technical guidance to cross-functional engineering teams.
- Unified product managers, QA engineers, and backend developers during a 6-month SaaS development cycle, aligning sprint requirements across teams and reducing post-sprint rework through shared acceptance criteria.

Project: E2f — Client Project (Full Stack Developer)

- Delivered a high-availability workflow engine processing 5,000+ daily task operations for an enterprise client, maintaining consistent uptime under concurrent multi-user load.
- Accelerated admin dashboard rendering by 35% through virtual scrolling for large dataset tables, eliminating lag for data sets exceeding 10,000 rows.
- Developed 30+ GraphQL and RESTful API endpoints in NestJS using Data Transfer Objects (DTOs) and query handlers, reducing JSON payload sizes and improving overall API throughput across all consumer clients.
- Provisioned cloud infrastructure across 3 environments on AWS (EC2 instances and S3 buckets) with a normalized MySQL schema, enabling horizontal scalability.
- Drove 12+ Agile sprints end-to-end, facilitating retrospectives and backlog grooming sessions that improved team velocity and achieved on-time delivery for all committed sprint goals.

Infigon Futures — Front-End Developer Intern

December 2023 – May 2024 | Remote

Project: EdTech Platform

- Built 2 production-ready portals (admin and student) for a new EdTech platform from the ground up within a 6-month internship, using React.js, Next.js, and Tailwind CSS.
- Reduced page load time by 20% by migrating client-side components to Server-Side Rendering (SSR) in Next.js, improving Lighthouse performance scores and search engine visibility.
- Enforced Role-Based Access Control (RBAC) across 3 user permission levels, restricting access to sensitive data and improving platform security compliance by 18%.
- Established a shared Tailwind CSS component library with 20+ reusable components, increasing team-wide frontend development velocity by 17% across the product team.
- Streamlined sprint workflows across a 6-month project lifecycle by leading preparation for 10+ backlog grooming sessions and sprint reviews, maintaining consistent Agile delivery cadence and on-time task completion.

SKILLS

Languages — JavaScript (ES6+), TypeScript, Python, C, HTML5, CSS3, SQL

Frameworks and Libraries — React.js, Next.js, Node.js, Express.js, NestJS, Redux, Tailwind CSS, SASS, Bootstrap

Databases — MySQL, MongoDB, Query Optimization, Database Indexing, Schema Design, Data Normalization, ORM

Cloud and DevOps — AWS (EC2, S3), Deployment, CI/CD

Tools — Git, GitHub, VS Code, Postman, ESLint

APIs and Architecture — REST, GraphQL, Server-Side Rendering (SSR)

Other — Agile Methodology, Unit Testing, Scrum, Sprint Planning, Backlog Grooming, Software Development Life Cycle (SDLC), Technical Documentation

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering

August 2019 – June 2023 | Visakhapatnam

Gayatri Vidya Parishad College of Engineering

CERTIFICATIONS AND ACHIEVEMENTS

- AWS Certified Cloud Practitioner.
- LeetCode: Solved 300+ algorithmic problems across data structures, algorithms, and complexity optimization - top 20% ranking.
- CAT 2023: Secured 96+ percentile in Data Interpretation and Logical Reasoning (DILR) out of 300,000+ test takers nationwide.
